- Résoudre le problème CVE-2018-3646 sur VMWare ESXi 6.7.0

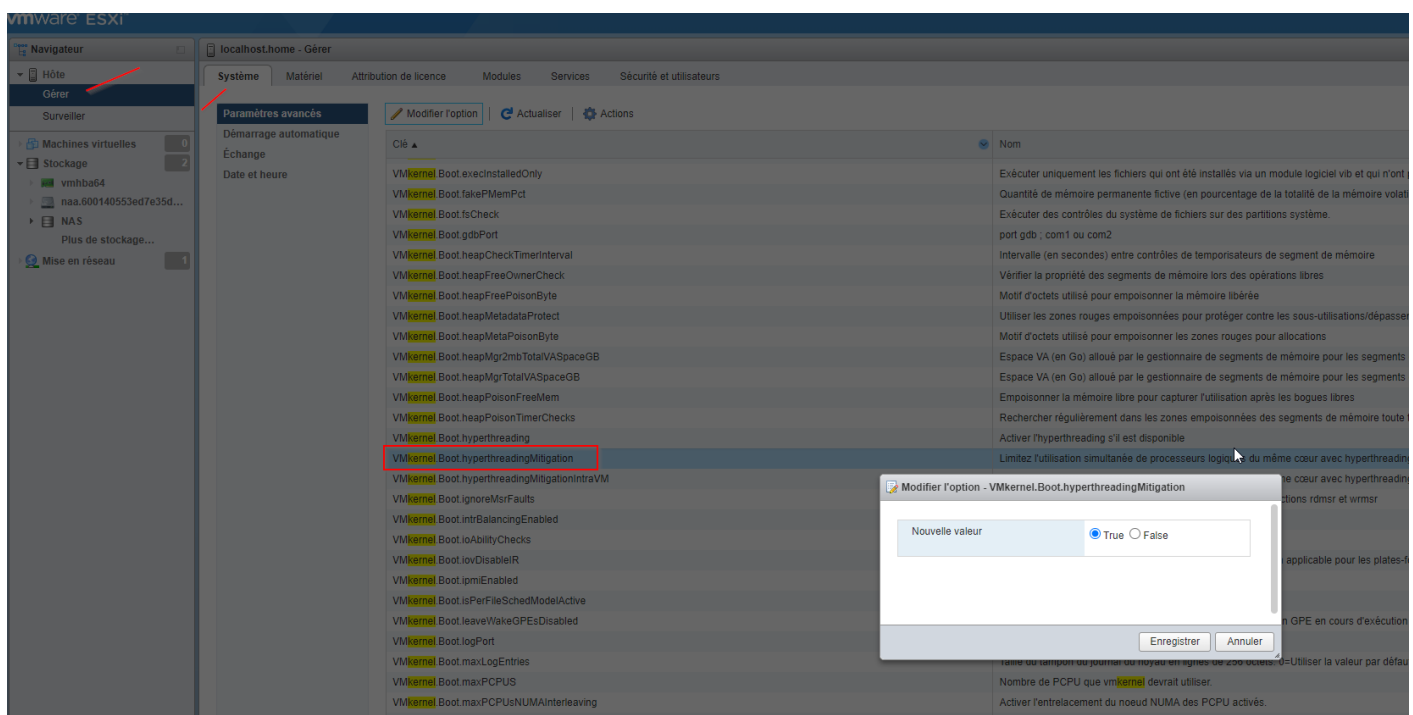

Résoudre le problème CVE-2018-3646 sur VMWare ESXi 6.7.0

Afin de résoudre la petite notification indiquant un problème de sécurité avec la CVE-2018-3646, il faut faire une petite manipulation.

The screenshot shows the VMware ESXi host management interface for 'localhost.ht.home'. The system information panel on the left displays the version as 6.7.0 Update 3 (Build 14320388), the state as 'Normal (not connected to any vCenter Server)', and the uptime as 0.02 days. The resource usage panel on the right shows CPU usage at 102 MHz (41.6 GHz capacity), memory usage at 2.2 GB (95.96 GB capacity), and storage usage at 1.43 GB (1.09 TB capacity). A blue notification bar at the bottom states: 'This host is potentially vulnerable to issues described in CVE-2018-3646, please refer to <https://kb.vmware.com/s/article/55636> for details and VMware recommendations.'

Accéder aux réglages du système pour activer "VMkernel.Boot.hyperthreadingMitigation".

The screenshot shows the VMware ESXi configuration interface for 'localhost.ht.home'. The 'Système' tab is selected, and the 'Paramètres avancés' section is expanded. The 'VMkernel.Boot.hyperthreadingMitigation' setting is highlighted with a red box. A dialog box titled 'Modifier l'option - VMkernel.Boot.hyperthreadingMitigation' is open, showing the 'Nouvelle valeur' field set to 'True'. The dialog has 'Enregistrer' and 'Annuler' buttons.

Redémarrer le serveur et la notification disparaîtra.

Obtenir vCenter Server

Créer/Enregistrer une VM

Arrêter

Redémarrer

Actualiser

Actions

localhost.home

Version :6.7.0 Update 3 (Build 15160138)

État :Normale (non connecté à vCenter Server)

Temps de fonctionnement :0 jours

i You are running HPE Customized Image ESXi 6.7.0 Update 3 version 670.U3.10.5.5 released on March 2020 and based on VMware ESXi 6.7.0 Update 3.
